

## Cost-efficient Position Indication in a Rugged Housing

### Fiama OP7 - Position Indication Clear and Simple

The Fiama OP7 series 5-digit position indicator is both economical and rugged - and that means lower up-front costs and decreased maintenance time. The ultrasonically-welded housing is shock-proof and heat resistant. For applications in a corrosive environment, the OP7 is available with a stainless-steel hollow shaft.

### The Exact Device You Need

Do not design your application around a device, get the device best suited to your application. Fiama has a broader selection of gear ratios and bore sizes than any other manufacturer, which means shorter lead times and greater application flexibility for you.

### The Total Solution with One Purchase Order

Fiama's full selection of accessories makes your position application simple - from ordering to installation. Angular gearboxes allow accessible mounting of the handwheel when the shaft is in an awkward position. For applications where direct mounting is not possible even with a gearbox, use our flexible couplings, available up to 5 meters long. That improved access decreases changeover time and eliminates the need to reach further into the machine.

### More Than Just the Classic Indicator

Fiama has a full line of position products, from servo driven positioners to digital

handwheels. Call Sensors Incorporated today for help with your applications.
