GET PRECISE DETECTION OF SMALL TARGETS WITH WFL

Product description

The WFL laser fork sensor family is characterized by fast response times and a highly focused visible laser beam. The sender and receiver, which operate using the through-beam principle, are combined in a single housing. This enables maximum positioning accuracy. Due to extremely fast response times and high resolutions, these sensors are ideal for detecting very small objects, such as needles, and transparent objects. With more than 20 sensors available, this line of fork sensors can be used for a wide variety of applications.

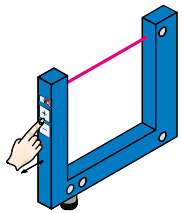
Setting the switching threshold

Teach-in

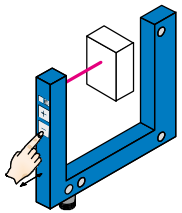
The switching threshold is set automatically. Fine adjustment is possible using the "+"/"–" buttons.

1. No object or substrate in the beam path



Press the "+" and "–" buttons together and hold for 1 second.
The red function indicator flashes slowly.

2. Object or label in the beam path



Press the "–" button for 1 second.
Red function indicator goes out.

Notes

Material speed = 0 (machine at a standstill).

Once teach-in process is complete, the switching threshold can be adjusted at any time using the "+" or "–" button. To make minor adjustments, press the "+" or "–" button once.
To configure settings quickly, keep the "+" or "–" button pressed for longer.

Press both the "+" and "–" buttons together (3 seconds) to lock the device and prevent unintentional actuation.

Press both the "+" and "–" buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting: Q = light switching.
